Subject: Sampling and Analysis Plan for Air Monitoring, The Dalles, Oregon
Paragraphs 33 and 37, Unilateral Administrative Order for Response Action
CERCLA Docket No. 10-2012-0200

Dear Mr. Craig:

Transmitted herewith is the summary report for air and landfill gas sampling performed pursuant to Appendix I of the Unilateral Administrative Order for Response Action (“EPA approved Sampling and Analysis Plan”). The Arcadis report, titled “Air Sampling and Monitoring Data Report, Lockheed Martin Site, The Dalles, Oregon” is submitted in compliance with paragraphs 33 and 37 of the Order.

Since the field monitoring results indicate significant variability in concentrations observed at the RCRA Landfill vents, additional sampling at these vents is recommended. The concentrations of landfill gases at the vents varied depending on time, sampling methods, and the instrumentation used. Lockheed Martin is recommending additional sampling using automated instrumentation that will allow logging of data at regular time intervals. These data from longer term sampling could be used to determine appropriate extractive sampling at potential exposure points. Lockheed Martin would welcome the opportunity to meet with EPA to discuss approaches for the additional investigations to addresses site uncertainties.

Please contact me at 720-842-6106 or 303-229-7063 if you have any questions regarding this submittal.

Sincerely,

A handwritten signature in blue ink that reads "Bill Bath".
